

Green space improvement

Reducing shallow root growth

Insect and infestation control

Relieving soil compaction

# Green space improvement

Successful tree care begins **under** the ground!

The solution for:

- ▶ Trees in urban spaces
- ▶ Parks and green spaces
- ▶ Heritage trees
- ▶ Valuable trees

Green space improvement in parks as well as in city centers.

## Advantages of the TFI-methode®:

- 30 years of proven effectiveness
- One treatment lasts for at least 7 years
- Environmentally friendly
- Minimal impact to surrounding environment
- Can be used year-round

**Good soil quality is essential to tree health. With a few treatments, TFI can improve tree growing conditions and produce soil that remains healthy for a minimum of seven years.**

TFI is your partner in the struggle against habitat depletion. Particularly in urban environments, organic substances in soil can become depleted. The TFI-method brings your soil back to life and supports the vitality of your trees. Underground, roots grow deeper and branch out further. Above ground, you enjoy stable trees with healthy foliage that are resistant to fungi and diseases. The quality of the green environment improves significantly.

The TFI-Method® is a unique, proprietary technology that produces real forest conditions anywhere in the Netherlands.

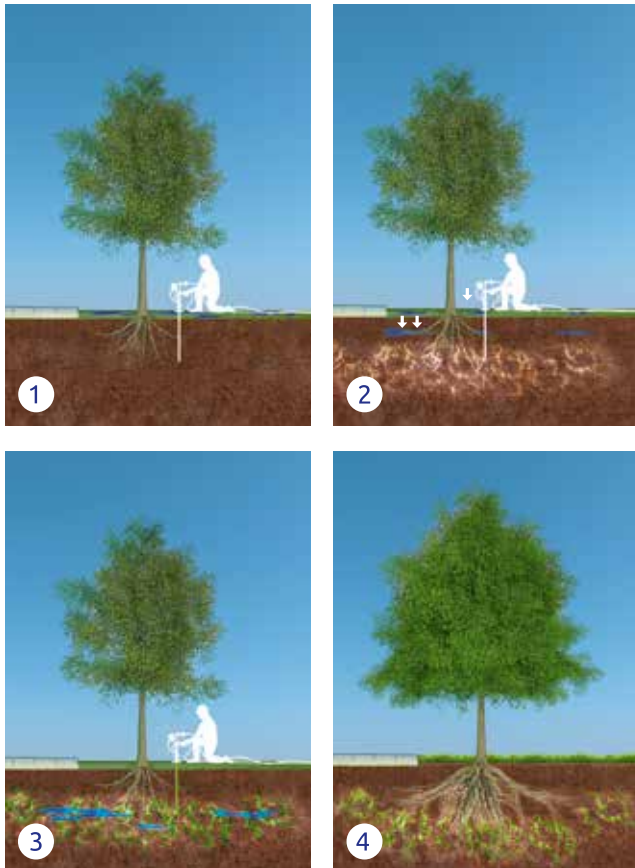

Maximum results without excavating or disturbing the surrounding environment.

As depicted above in Amersfoort, the pavement remains undisturbed during treatment.

# How the TFI-method® works

TFI stands for Tree Fertilizer Injector. By creating new pores in the soil and filling them with our specially developed substrate, we feed the soil and stimulate the development of natural soil structure and healthy soil.

1. Careful insertion of a lance into the soil.
2. Creation of a network of interconnected cracks in the soil.
3. Filling of the cracks with a natural soil substrate.
4. The result: Optimal root growth and rainwater infiltration.

> find a more detailed description at [www.tfi-international.com](http://www.tfi-international.com)

Unique to the TFI-method® is that we work with a low, pulsing pressure. We also use a proprietary blend of natural substrate. Together, these ensure a long-lasting effect that endures for at least 7 years.

"Thanks to the TFI method®, our trees are no longer slated to be replaced. Instead, they form a healthy foundation for a beautiful, new avenue." Ad van der Ven, Haaren county

A new root channel.

Root growth in the same root channel after one growing season.

## Other applications

The TFI-method® is an excellent way to prepare new growing areas or to improve current growing spaces. New plants get a flying start with a long-lasting, enriched soil. We also use this technology for insect and infestation control, to reduce shallow root growth and to alleviate compacted soil. Separate information sheets are available. You can also read more about it at our website: [www.tfi-international.com](http://www.tfi-international.com).

## More information

Would you like to know more about the possible application of TFI for your area? Visit [www.tfi-international.com](http://www.tfi-international.com) or contact us directly at +31 35 577 0970 or [info@tfi-international.com](mailto:info@tfi-international.com)
